We can use 'Split Column' option and select 'By Number of Characters' option as follows

Then following window has to be opened

Now our agenda is to separate city name and its code, so first we need to identify code length that is similar to all cities in that column then after check the code that exist at right hand side or left hand side. From our table in city column we identified city code length is 5 and it was exist at right hand side. After enter and select the options as appear in above picture click ok.

After Split the column city the employee table looks alike as follows:
